

# LASER PEDIATRIC DENTISTRY

## What Laser?

In this course you will learn the difference between diode, CO2, Biolase-Waterlase, and Fotona's Lightwalker. You will have opportunity to use each laser and enough information to help you decide which laser will be best for you and your practice.

## All Possible Procedures

The goal is that at the end your 2 days of learning, you will be able to go back to work on Monday and begin providing no-shot, laser pediatric dentistry with confidence.

## Frenum: Inspection, Detailed Surgical Technique, Optimal Timing of Surgery

You will learn the validated protocols to confidently diagnosis tongue tie, how to precisely release the frenum with any laser, correctly, and the critical importance of timing the surgery and working with a team for ages 0-18.

## Instructors: Amy Luedemann DDS, MSD & Phil Hand, DDS

This dream course is presented to you by the International Academy for Innovative Dentistry, IAID, and to date there has not been any other course like it. If you have a laser and know there is much more you could be doing with it for your pediatric patients, but don't feel you have the training, this course is for you. If you are considering purchasing a laser and becoming a pediatric laser dentist, but aren't sure which laser will best suit you and your practice, this course is designed to help you make the best decision. Lastly, if you want to feel confident giving an objective diagnosis of tongue tie, using validated protocols, as well as feeling strong in your skills to proficiently release a tongue tie and have great, predictable outcomes, then you will definitely not want to miss this course. There will be lecture, case presentations, video instructional as well as time with each of the lasers for all of the participants.

# LASER PEDIATRIC DENTISTRY

## Day 1

**9:00 AM Registration**

Laser Physics: what is a LASER

Classification of LASER

Soft Tissue Lasers vs Hard Tissue Lasers

Laser-Tissue Interaction: practically comparing more than 5 laser wavelengths effects on soft and hard tissues

Laser for caries detection

Diagnosis and Preventive Laser Dentistry

Laser for minimally invasive caries removal and MIH

Laser for vital and non-vital pulp therapy in primary and permanent teeth

**5:00 PM End of the first day**

## Day 2

**9:00 AM**

Frenum Inspection, tongue, lip and buccals, validated protocols

Importance of a Team Approach and ideal timing of release

Dual Wavelength Release Technique

Laser Labial Frenectomy Technique

Laser Lingual Revision, mastering a complete release with any laser

Laser Gingivectomy

Laser tumor removal

Hands on (animal model), multiple lasers available

Q&A

**5:00 PM End of the course**

## COURSE COST

€2350 for **IAID Members**

€2500 for **Non-IAID Members**

**Kidstown Dental Katy, TX 77494**
